

## Enhance memory and mental clarity

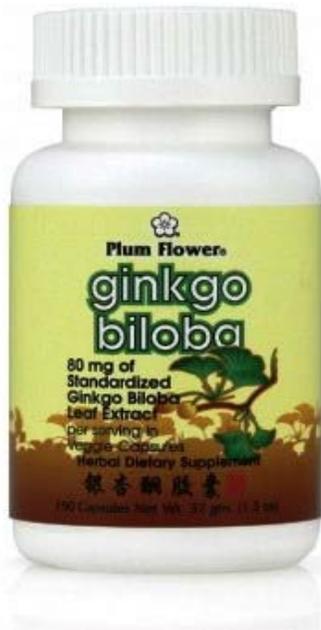

- ◆ Do you panic when you can't remember someone's name?
- ◆ The last time you had to speak in front of a group, did you freeze because you couldn't remember a thing?
- ◆ Are details important in your work, and you're afraid you'll fall behind?
- ◆ Is there a lot of trivia in your head, but when you need important information, you can't remember it?

If you answered yes to any of the above questions, then perhaps you could benefit from taking **GINGKO BILOBA** (Yin Xing Tong Ye). As we age, many find that we increasingly complain about how our memory is fading, but is this really inevitable? Traditional Chinese medicine doesn't believe so, as a matter of fact the Chinese simply start taking the herb Yin Xing Tong Ye, what they refer to as their "brain food." Chinese medicine asserts that by nourishing the brain Ginkgo will improve memory and brain function and enhance circulation by drawing in more oxygen and nutrients.

The **GINGKO BILOBA** tree is the world's oldest living tree, a species whose existence can be traced back over 250 million years. It was for this reason in 1859 that Charles Darwin referred to the Ginkgo as a living fossil. The Asian culture considers it a phenomenon, an object of veneration, a sacred tree and a symbol of the unity of opposites. The leaf extract has been shown to have a wide range of biological activities. The most well known is its use to improve short term memory. Other important effects include a protective effect on the blood brain barrier and an anti-radical antioxidant effect. Ginkgo will help to maintain integrity and permeability of cell walls by inhibiting lipid peroxidation of membranes. Other studies have shown vascular-tone regulating effects and help in modulating cerebral energy metabolism.

However, ginkgo's most powerful effect is on the circulatory system, which increases blood circulation and oxygen levels in the brain as well as in other critical organ tissues. It prevents platelet aggregation (or clumping) inside of the arterial walls, and increases arterial wall strength and flexibility which decreases the opportunity of the formation of arteriosclerotic plaque. Since Ginkgo powerfully increases oxygen flow to the brain and enhances the brain's uptake and utilization of glucose it can be used to fight senility and forgetfulness as well as improve alertness, memory, and mental performance.
